

Department of Pesticide Regulation
Nonfumigant volatile organic compound (VOC) regulations
Product list (updated April 8, 2022)

The Department of Pesticide Regulation's (DPR's) nonfumigant VOC regulations (Title 3 California Code of Regulations (3 CCR) sections 6452.2, 6558, 6577, 6880, 6881, 6883, 6884 and 6886) include sales and use restrictions for certain agricultural use products containing any of the following pesticides as the primary active ingredient provided certain criteria are met.

Primary Active Ingredient	Emission Potential (EP) Threshold (%)
Abamectin	35
Chlorpyrifos	25
Gibberellins	25
Oxyfluorfen	15

If a product contains more than one active ingredient, the primary active ingredient is the one present at the highest percentage in a product. These criteria do not apply to products that contain an active ingredient listed above, but not as the primary active ingredient, including products with one or more active ingredients present at the same percentage.

The emission potential (EP) is an estimate of the product VOC content and is normally determined by the registrant using thermogravimetric analysis, with the test results reviewed and approved by DPR.

Products labeled only for non-agricultural uses are excluded from the regulations. Non-agricultural uses include: a) home use; b) use in structural pest control; c) industrial or institutional use; d) control of an animal pest under the written prescription of a veterinarian; or e) vector control. All other uses are considered agricultural.

DPR classifies products containing any of the four pesticides into three groups:

High-VOC product: a) contains any of the four pesticides as a primary active ingredient; and b) labeled for agricultural use; and c) the EP is greater than the threshold.

Low-VOC product: a) contains any of the four pesticides as a primary active ingredient; and b) labeled for agricultural use; and c) the EP is equal to or less than the threshold.

Excluded product: a) contains any of the four pesticides, but not as a primary active ingredient; or b) labeled only for non-agricultural use.

The nonfumigant VOC restrictions only apply to high-VOC products. Low-VOC products or excluded products have no restrictions.

Department of Pesticide Regulation
 Nonfumigant volatile organic compound (VOC) regulations
 Product list (updated April 8, 2022)

Actively registered products containing **abamectin**. Products are listed in order by EP. Products marked “NEW” indicate a change from the last list. If a product was only recently registered or has an inactive registration it may not appear on the list below. Agricultural products with inactive registrations are considered high-VOC unless they are listed below as low-VOC, formulated as a solid (e.g., powder, granule), or meet the criteria for excluded products.

Low-VOC Abamectin Products, EP ≤ 35.0%

Product Name	Registration Number	Registrant	Formulation	EP (%)
Abacide 2	7946-27-AA	J.J. Mauget Co.	Solution/Liquid	0.00
Abacide 2 HP	7946-30-AA	J.J. Mauget Co.	Solution/Liquid	0.00

 Product list (updated April 8, 2022)

Actively registered products containing **chlorpyrifos**. Products are listed in order by EP. Products marked “NEW” indicate a change from the last list. If a product was only recently registered or has an inactive registration, it may not appear on the list below. Agricultural products with inactive registration are considered high-VOC unless they are listed below as low-VOC, formulated as a solid (e.g., powder, granule), or meet the criteria for excluded products.

Additionally, certain inactive products are subject to the restrictions outlined in the Notice of Use & Sale Conditions for Chlorpyrifos Products (Notice), dated October 9, 2019. As of December 31, 2020, possession and use of certain chlorpyrifos products by any person in California is prohibited. To view the Notice and list of products, please visit DPR’s Final Requirements for Chlorpyrifos Web page at <https://www.cdpr.ca.gov/docs/chlorpyrifos/pdf/general_notice_append_o.pdf>.
