

***Agricultural Drift* Cases Reported in California¹ Associated With² Pesticide
Exposure Summarized by Application Site
2005**

Application Site³	Number of Cases⁴	Number of Incidents⁵
BERRIES		
Blackberries	1	1
CITRUS		
Oranges	39	2
FIBER CROP		
Cotton	1	1
FORAGE CROP		
Alfalfa	6	2
FRUITING VEGETABLE		
Tomatoes	2	2
GRAIN		
Corn	3	2
GRAPES		
Grapes	56	9
LEAFY/STEM VEGETABLE		
Broccoli	6	1
Lettuce	1	1
LIVESTOCK		
Eggs (Poultry)	1	1
MULTIPLE		
Soil, Spinach	1	1
NON-CROP		
Soil	396	8
NUT TREES		
Almonds	15	4
ORNAMENTAL		
Ornamental Plants (Other or Unspecified)	1	1
POME FRUIT		
Apples	1	1
ROOT CROP VEGETABLE		
Root Crops (Other or Unspecified)	11	1

Application Site ³	Number of Cases ⁴	Number of Incidents ⁵
STONE FRUIT		
Peaches	2	2
Prunes	2	2
TREES		
Ornamental and/or Shade Trees	13	1
TOTAL	558	43

¹ **Source:** California Department of Pesticide Regulation, Pesticide Illness and Surveillance Program.

² **Associated With:** Includes cases classified as definitely, probably or possibly related to pesticide exposure

Definite : High degree of correlation between pattern of exposure and resulting symptomatology. Requires both medical evidence (such as measured cholinesterase inhibition, positive allergy tests, characteristic signs observed by medical professional) and physical evidence of exposure (environmental and/or biological samples, exposure history) to support the conclusions.

Probable : Relatively high degree of correlation exists between the pattern of exposure and the resulting symptomatology. Either medical or physical evidence is inconclusive or unavailable.

Possible : Some degree of correlation evident. Medical and physical evidence are inconclusive or unavailable.

³ **Application Sites:** Site of the pesticide application. For crops, this includes applications at the growing site and to the commodity while being packed for sale. For incidents involving drift, the intended application site is listed.

⁴ **Number of Cases:** Indicates the number of individuals exposed in one incident or episode of agricultural drift.

⁵ **Number of Incidents:** Indicates the number of episodes where agricultural pesticide drift occurred based on the application site.

About the Pesticide Illness Surveillance Program Data

Pesticide-related illnesses have been tracked within the state of California for more than 50 years. The California Environmental Protection Agency, Department of Pesticide Regulation (DPR) maintains a surveillance program which records human health effects of pesticide exposure. The Pesticide Illness Surveillance Program (PISP) documents information on adverse effects from pesticide products, whether elicited by the active ingredients, inert ingredients, impurities, or breakdown products. This program maintains a database, which is utilized for evaluating the circumstances of pesticide exposures resulting in illness. This database is consulted regularly by staff who evaluate(s) the effectiveness of the DPR pesticide safety programs and recommend changes when appropriate.
