

#### Erratum: Table IV.8 Occupational Exposure Estimates (ppm)

We regret that there is an error in Table IV.8 Occupational Exposure Estimates (ppm) on p. 126 of the 2015 1,3-Dichloropropene Risk Characterization Document. The Lifetime Air Concentration (LAC) value listed for all three occupational bystander scenarios (shallow shank w/o tarp, deep shank w/o tarp, drip w/ tarp) is 0.0033 ppm. The correct value is 0.00033 ppm. The correct value is found in the text on p. 142 and was also used for the risk calculation.

We apologize for any issues caused by this error.
