Table C4: Hospitalization and Disability Associated¹ with Illnesses/Injuries

*Possibly Related² to Pesticide Exposure in California,

Summarized by Occupational Status and Activity

2019

Occupational³

		Hospitalization ⁴			Disability ⁵		
Activity ⁶	Total Cases	No. Cases	%	Unknown ⁷	No. Cases	%	Unknown ⁸
Applicator	8	0	0	0	2	25	2
Emergency Response	1	0	0	0	0	0	1
Field Worker	18	0	0	0	0	0	2
Mixer/Loader	1	0	0	0	0	0	1
Other	5	0	0	0	0	0	2
Packaging/Processing	5	0	0	0	1	20	0
Routine	8	0	0	0	1	12.5	4
Unknown	5	0	0	0	0	0	5
Total Occupational	51	0	0	0	4	7.8	17

Non-Occupational³

Activity ⁶	Total Cases	Hospitalization ⁴			Disability ⁵		
		No. Cases	%	Unknown ⁷	No. Cases	%	Unknown ⁸
Applicator	22	0	0	1	0	0	14
Handler (Other or Unspecified)	1	0	0	0	0	0	0
Other	17	4	23.5	1	4	23.5	9
Routine	67	0	0	0	1	1.5	29
Transport/Storage/Disposal	2	0	0	0	0	0	1
Unknown	4	0	0	0	0	0	3
Total Non-Occupational	113	4	3.5	2	5	4.4	56
TOTAL CASES	164	4	2.4	2	9	5.5	73

- 1. Source: California Department of Pesticide Regulation, Pesticide Illness Surveillance Program.
- 2. Relationship: Degree of correlation between pesticide exposure and resulting symptomatology.

Possible: Some degree of correlation evident. Medical and physical evidence are

inconclusive or unavailable.

3. Occupational or Non-Occupational: The relationship between the illness/injury and the individual's work.

Occupational: Work related. The individual was on the job at the time of the incident. This

includes both paid employees and volunteers working in similar capacity to paid

employees.

Non-Occupational: Not work related. The individual was not on the job at the time of the incident.

This category includes individuals on the way to or from work (e.g., before the

start of the workday, after the end of the workday).

4. Hospitalization: Count of number of cases in which an individual was hospitalized at least one full day (24-hour period).

5. Disability: Count of number of cases in which an individual missed at least one full day (24-hour period) of work or other normal activity, such as school.

6. Type of Activity: Activity of the injured individual at the time of exposure

Applicator: Applies pesticides by any method or conducts activities considered ancillary to

the application (e.g., cleans spray nozzles in the field).

Mixer/Loader: Mixes and/or loads pesticides. This includes: 1) removing a pesticide from its

original container; 2) transferring the pesticide to a mixing or holding tank; 3) mixing pesticides prior to application; 4) driving a nurse rig; or 5) transferring the pesticide from a mix/holding tank or nurse rig to an application tank.

Handler (Other or

Unspecified):

Assists with tasks following an application (i.e., tarp removal during a structural application or soil fumigation, and not ancillary to the application or mix/load

activity).

Field Worker: Works in an agricultural field performing tasks such as advising, scouting,

harvesting, thinning, irrigating, driving tractor (except as part of an application), field packing, conducting cultural work in a greenhouse, etc. Researchers

performing similar tasks in an agricultural field are also included.

Packaging/ Processing: Handles (packs, processes, retails) agricultural commodities from the packing house to the final market place. Field packing of agricultural commodities is

classified as field worker.

Transport/ Storage/

Disposal:

Transports or stores pesticides between packaging and preparation for use. This includes shipping, warehousing, and retailing, as well as storage by the end-user

prior to preparation for use. Disposal of unused pesticides is also included in

this activity. This excludes driving a nurse rig to an application site.

Emergency Response:

Emergency response personnel (police, fire, ambulance, and HAZMAT

personnel) responding to a fire, spill, accident, or any other pesticide incident in

the line of duty.

Routine: Combination of 3 Routine Activities:

- a. Routine Indoor: Conducts activities in an indoor environment with minimal expectation for exposure to pesticides. This includes people in offices and businesses, residential structures, etc. who are not handling pesticides.
- b. Routine Outdoor: Conducts activities in an outdoor environment with minimal expectation for exposure to pesticides. This excludes field workers in agricultural fields. This includes gardeners who are not handling pesticides.
- c. Routine (Other/Unspecified): Conducts activities in an environment with minimal expectation for exposure to pesticides but is not adequately defined as indoor or outdoor. This includes individuals exposed to pesticides while inside a vehicle.

Other: Activity is not adequately described by any other activity category. This

includes but is not limited to: 1) dog groomers not handling pesticides; 2) individuals handling pesticide treated wood; 3) two or more activities with

potential for pesticide exposure.

Unknown: Activity is not known.

7. Hospitalization Unknown: Investigation did not specify whether hospitalization occurred or not.

8. Disability Unknown: Investigation did not specify whether disability occurred or not.

About the Pesticide Illness Surveillance Program Data

Pesticide-related illnesses have been tracked within the state of California for more than 50 years. The California Environmental Protection Agency, Department of Pesticide Regulation (DPR) maintains a surveillance program which records human health effects of pesticide exposure. The Pesticide Illness Surveillance Program (PISP) documents information on adverse effects from pesticide products, whether elicited by the active ingredients, inert ingredients, impurities, or breakdown products. This program maintains a database, which is utilized for evaluating the circumstances of pesticide exposures resulting in illness. This database is consulted regularly by staff who evaluate the effectiveness of the DPR pesticide safety programs and recommend changes when appropriate.
